DRY BAG DUFFEL BAG

“GARDEN HOSE” GRIP REMOVAL

Some riders have discovered that the nylon webbing carrying straps on these bags look and work better if the “garden hose” grips are removed. These oversize grips are not needed to protect your hands unless the Dry Bags are heavily packed and needed to be carried long distances. To remove these grips, they must be carefully cut lengthwise from end to end with a knife or sharp scissors, without cutting or damaging the webbing straps inside. A sharp scissors is safer and easier to use, and is the recommended tool for the job. If you have questions or comments, please call us at 800 222 1994.
